

# Brainstorming & Idea Prioritization

**Project:** FitBuddy – AI Fitness Plan Generator Using Gemini

**Purpose:** Project-track submission material adapted to the supplied AI/ML/Gen-AI template.

## Problem space

People often find it difficult to build a consistent fitness routine that reflects their goals, available intensity, and personal profile.

## Proposed idea

FitBuddy uses a conversational generative-AI service to create a structured seven-day workout plan and related nutrition tips from user-provided fitness details.

## Candidate ideas and prioritization

- Personalized workout generation — core value and central project feature.
- Feedback-based plan revision — improves usefulness after the first result.
- Nutrition tips — adds goal-related guidance, with appropriate safety disclaimers.
- Admin/user overview — supports basic monitoring and demonstration.

## Selection rationale

The project prioritizes a demonstrable end-to-end flow: collect fitness profile → request AI-generated plan → store and display result → allow feedback-based revision.
