

Customer Journey Map

Project: FitBuddy – AI Fitness Plan Generator Using Gemini

Purpose: Project-track submission material adapted to the supplied AI/ML/Gen-AI template.

1. Discover

User opens FitBuddy and understands that it generates an AI-assisted fitness plan.

2. Provide details

User enters relevant profile, goal, and preferred intensity information.

3. Generate plan

Frontend sends the request to the backend; backend validates inputs and calls the Gemini integration.

4. Review

The result is shown to the user and stored by the application where configured.

5. Refine

User provides feedback and requests an updated plan.

6. Get guidance

User requests nutrition tips and reviews them as general information, not medical advice.

Potential friction points

Missing API key, network/API limits, malformed AI output, incomplete input, or database errors. Provide clear error messages and avoid exposing secrets.
