

Problem Statement

Project: FitBuddy – AI Fitness Plan Generator Using Gemini

Purpose: Project-track submission material adapted to the supplied AI/ML/Gen-AI template.

Problem statement

Users may lack the time, knowledge, or confidence to organize a weekly workout plan suited to their stated fitness goal and preferred intensity.

Target users

People seeking a starting point for general fitness planning. The application is not a medical or clinical decision system.

Project objective

Build a web application that collects user fitness details, generates a personalized plan with Google Gemini, stores relevant records, and supports plan revision.

Success indicators

- A user can submit a fitness profile.
- The application can request and present a generated plan when AI credentials and network access are available.
- The application stores user and plan data using its configured database.
- The user can submit feedback to request a revised plan.
