

Performance and Functional Testing Plan

Project: FitBuddy – AI Fitness Plan Generator Using Gemini

Purpose: Project-track submission material adapted to the supplied AI/ML/Gen-AI template.

Test scenarios

- Valid profile submission returns a response or a clear provider/configuration error.
- Missing or invalid input is rejected or handled safely.
- AI provider timeout/rate limit produces a user-readable error.
- Generated plan can be displayed and persisted.
- Feedback request reaches the revision flow.
- Nutrition-tip request returns a readable result or safe error.
- Admin view loads without leaking secrets or unnecessary personal information.

Performance measures

Record response time for normal requests, AI generation latency, error rate, and database operation time. Run repeated tests with non-sensitive sample profiles.

Test status

This is a test plan, not a claim that automated tests have already passed. Execute and record actual results in your submission before presenting performance figures.
