

Proposed Solution

Project: FitBuddy – AI Fitness Plan Generator Using Gemini

Purpose: Project-track submission material adapted to the supplied AI/ML/Gen-AI template.

Overview

FitBuddy is a browser-based AI fitness planning application. The user submits fitness details; the backend uses Google Gemini to generate a plan and returns the result for review.

Core user flows

- Create/submit a user fitness profile.
- Generate a seven-day workout plan.
- Review the plan and submit revision feedback.
- Request nutrition tips.
- Review stored users/plans in the administrative view where implemented.

Safety and privacy considerations

Collect only information needed for the feature, protect credentials, avoid logging sensitive prompts unnecessarily, and clearly state that AI-generated fitness/nutrition content is general guidance.
